1.1 iZone 211 - Wiring layout for base system

10 Zone system with 1 colour touch screen shown above

A maximum of 12 zones and 12 colour touch screens can be supported by one iZone system (See Network Extension Module 1.3 for Details)
6 Zone system with 1 colour touch screen shown.

A maximum of 12 zones and 12 colour touch screens can be supported by one iZone system (See Network Extension Module 1.3 for Details)
1.3 Optional equipment for temperature controlled zones

- **CCPU**: Central Processing Unit
- **CDTS**: Installed into the supply air duct off the fan coil unit
- **CCTS**: (optional) Install additional colour touch screens in zones requiring temperature control
- **CCT24AC**: Connect Sensor module to any network port in the system (CCTS or CNEM)
- **CNEM**: (optional) Install Network Extension Module to provide additional network ports if required
- **CSM**: (optional) Install Sensor Module to allow for Wired temperature sensors (CS) & Wireless temperature sensors (CRFS)
- **CZCO**: (optional) Wired Zone Controllers with temperature and occupancy sensor (Max 12 per system)
- **CRFS**: (optional) Wireless Temperature Sensors (Max 12 per system)
- **CNEM**: (optional) Network Extension Module to provide additional network ports if required
- **CR (optional)**: Wireless Repeaters

Connect Sensor module to any network port in the system (CCTS or CNEM)
1.4 Optional equipment for wired WiFi Control of system

- CCPU (Central Processing Unit)
- CB (Wired Bridge)
- Customers router or modem
- RJ45-12 cable: specific for connecting the CCPU and Wired Bridge
1.5 Optional equipment for wireless WiFi control

- **CCPU (Central Processing Unit)**
- **CSM (Sensor Module)**
  - Install Sensor Module to allow for wireless communication with Wireless Bridge (CB). Only one CSM is required per system.
- **CB (Wireless Bridge)**
- **CR (optional) Wireless Repeaters**
- **Customers router or modem**
1.6 iZone 311 - Optional equipment for isave addition

Note:
When the isave option is used the iZone system is limited to a maximum of 10 Zones
# 1.7 iZone 311 - Wiring connection to AC units

1.8 iZone 311 - Wiring connection to LG units

Unit Make

LG

LG condensing unit must be supplied with an optional PI485 Gateway (M) board in the condensing unit.

Connection

1. Connect a shielded, 2 core, twisted pair control cable from the CACUM to the PI485 Gateway (M) board in the condensing unit. (This cable is supplied by the installer). Polarity is critical see Fig (C) & (D) for correct connection.
### 1.9 iZone 311 - Wiring connection to Temperzone units

<table>
<thead>
<tr>
<th>Unit Make</th>
<th>Connection</th>
</tr>
</thead>
</table>
| Temperzone | 1. Connect a shielded, 2 core, twisted pair control cable from the CACUM to the UC7 board in the condensing unit. (This cable is supplied by the installer). Polarity is critical see Fig A & B for correct connection.  
2. Adjust location of jumper J1 to suit the length of control cable installed.  
3. Ensure the dip switches in the condensing unit are set correctly for the installed compressor type (digital / fixed speed) and fan speed control. Refer to the Temperzone service manual. |

![Fig (A) - Temperzone UC7 outdoor](image1)

![Fig (B) - iZone / Temperzone AC Unit Module](image2)
1.10 General installation instructions

1. The CCPU and CACUM can be installed on top of the indoor fan coil unit.
2. The CSM should be installed on the ceiling in the centre of the house. If any wireless sensor (CRFS) or wireless bridge (CB) is not within the range of the CSM then additional repeaters (CR) should be added to help relay the signal from the field device to the CSM.
3. Do **not** run the blue network cables alongside 240 Volt wiring.
4. When installing network cables down wall cavities or chasing network cables into walls, tape up and protect the RJ45 connector to avoid damage to the connectors. Installation damage to cables **is not** covered under warranty.
5. Always install zones in consecutive ports starting at Zone 1. The back of the CCPU is marked with the zone port numbers.
6. Do not directly hardwire the CT24V into the AC unit’s power supply. This may void the warranty as it will require an electrician in the event that a repair of the iZone power supply is required.
7. Connect Zone Damper Actuators (CZDA) to the zone ports using the RJ11 cables as shown.
8. Connect the Colour Touch Screens (CCTS) to the CAN ports using the RJ45 cables. If you are connecting more than 3 components requiring CAN ports to the system you will need to connect a Network Extension Module (CNEM) to one of the CAN ports on the CCPU using a short RJ45 cable. The CACUM will also support one CAN port.
9. If any zone is temperature controlled connect a Duct Temperature Sensor (CDTS) to the CDTS port. Install the sensor into the supply air duct upstream of all dampers. Secure the sensor in place by using reinforced aluminium tape.
10. When installing temperature controlled zones ensure the CCTS or sensor for the associated zone is installed in a location that is representative of the temperature in the room / zone. The sensor should be installed at approximately 1600mm above the floor and should not be subject to draughts, direct sunlight or heat from equipment such as computers, TV screens etc. The supply air outlets to this room must **not** blow conditioned air directly onto the sensors or touch screens, as a temperature sensor is located in the CCTS.
11. Connect the AC unit control cable to the CACUM. See table 1.7 For details. (This cable is not supplied by Airstream.)
12. The building must be fitted with a compatible WiFi modem. Contact Airstream for a list of approved and recommended modems.
13. If connecting the iZone system to a Home Automation system use an RS 232 or RS 484 serial connector.
14. Only connect the power supply to the CT24VAC port after all components have been connected.
2.0 System initialisation

All new or modified systems must be initialised prior to system configuration.

To initialise the system press the button on the underside of any colour touch screen. This button is recessed so you will need to use a pen to press the button.

The time to initialise the system will vary depending on the number of motors connected.

The system will also initialise when power is restored after a power failure.
3.0 System configuration

**WARNING**! Only qualified iZone installers should configure the iZone System. Incorrect configuration could result in damage to your air conditioning unit and system.

To configure your system click on the System Config icon on the home page.

Enter the system password “wamfud” and press the enter button. The enter button must always be touched to save changes.

You will now be in the System Configuration area:
3.1 Configuration main menu

Note:
Information on the configuration screen may vary depending which devices are connected to the system and if it is an iZone 311 or 211.
3.1 Configuration main menu cont.

Note:
Information on the configuration screen may vary depending which devices are connected to the system and if it is an iZone 311 or 211.
An * here indicates the temperature for this zone is being read from this panel.

This is the zone that is currently being configured. If the zone has been named its name will show here.

Touch here to make this zone an electronic variable constant.
Press repeatedly if more than one constant zone is required. This will step through the constant numbers. Select which constant you want this zone to be.

Touch here to make this zone a temperature controlled zone. This must only be done from the screen installed in the temperature controlled zone.

Touch here to make this zone an open / close zone.

Touch here to proceed to the next zone.

Touch here to go to the home screen.

Touch here to increase the maximum airflow to the zone.

Touch here to decrease the maximum airflow to the zone.

Touch here to increase the minimum airflow to the zone.

Touch here to decrease the minimum airflow to the zone.

Touch here to lock this touch screen controller in a zone only mode.
3.3 AC unit configuration (iZone 311 only)

Select method of controlling the AC unit.
- R/Air will control using the unit’s return air sensor.
- Master will control the AC unit from the colour touch screen that has been selected as the Master (3.1).
- Zones will automatically control the AC unit from the temperature controlled zones (3.1.2).

Toggle the high and low buttons to select the maximum and minimum temperature set points desired for “Economy Lock Mode”.

Touch here to go back and save the changes.

Touch here to view the fault history with this AC unit.

Touch here to display the actual AC unit controlling temperature on the AC unit control screen (see 4.3) Not available for R/Air temp on some AC unit makes.

Touch here to lock the AC Unit. You will need to enter a PIN number and then the number of days you want the system to operate for until it is automatically locked off. Do not forget your PIN. Service charges will apply for a technician to attend site to unlock your system.

Touch to lock the Economy mode. The Economy mode will limit the maximum and minimum temperature range for all controllers.

Touch here to go to the home screen.
3.4 Sensor configuration

Hold down the “Pairing Button” on the iZone wireless device. (see 3.5).

Then press here to pair the device to your iZone system.

Touch here to allow wired zone sensor LEDs to automatically turn off after use.

Touch here to view the status of the sensor batteries.

Touch here to go back and save the changes.

Displays the Radio frequency channel the system has been configured to. This channel can be changed if RF interference is being experienced.

If the channel is changed all wireless devices need to be paired.

Monday 01 Jan 2011 12:30 PM

iZone
Inventive · Intelligent · Intuitive
3.5 Pairing and configuring iZone RF Sensors

Set the zone selector switch to the correct zone number.

Press and hold the Pairing button on the wireless device. At the same time press the Pairing Button on the touch screen (see 3.4) and wait until the update is complete.

Remove front cover from sensor.

Note:
To pair other devices such as an iZone bridge or repeater simply press the pairing button on the device and at the same time press the pairing button on the touch screen and wait for the update to complete.
3.6 Sensor Calibration

Re-calibrated temperature for this zone

Touch here to adjust the calibration up by +0.1 deg C

Touch here to adjust the calibration down by -0.1 deg C

Total calibration offset from manufactured setting

Touch here to go back and save the changes.

Note:

Re-calibration of the temperature sensor in the touch screens (CCTS) can only be done from the touch screen you want to re-calibrate.
3.7 Fan auto configuration  (iZone 311 only)

Touch here to enable Fan Auto control and to proceed with Fan Auto set up

Touch here to set the AC Unit capacity for this system. The capacity selection will provide an approximate airflow capacity for the AC Unit.

Touch here to fine tune the airflow capacity. You can set the exact airflow in litres per second. This is available from the AC Unit manufacturer.

Select the correct fan speed type for the system installed. Refer to AC Unit Manufacturer manual

Only available on certain AC unit makes

Touch to here to go back to the previous configuration page (see 2.6).
3.7 Fan auto configuration cont. (iZone 311 only)

### 3.8 Wifi bridge configuration

![Diagram showing WiFi configuration screen](image)

- **ID:** 123123123  
  Displays the iZone system identification number.
- **IP:** 192.118.27.69  
  Displays the Bridge IP address allocated by the DHCP.
- **MAC:** 00:04:A5:G9:32:39  
  Displays iZone Ethernet controller MAC address.

- Touch here to go to the home screen.
- Touch here to go back and save the changes.
- Touch here to go to the manual WiFi configuration.
3.9 Manual IP Configuration

Select either Auto or Manual Configuration. If manual is selected you will need to know the IP, Subnet Mask, Default Gateway, Primary DNS Server and Secondary DNS Server addresses if applicable.

Touch here to apply the changes to the configuration.

Touch here to go back without saving the changes.

Touch here to go to the home screen.

Touch here to apply the changes to the configuration.
3.10 WiFi connection

A green symbol indicates the iZone system is now connected to WiFi and ready to use.

A grey symbol indicates the Bridge is connected to the iZone system but is not connected to the home computer network.
3.11 Smart phone configuration

You will need to download the iZone App onto your smart phone. When using WiFi from inside the home / office you will not be required to enter a password just press login.

If you want to access the system using your smart phone from outside the WiFi range you will need to subscribe to iZone World Wide. Go to http://www.air-stream.com.au/izone-world-wide-service.html

To subscribe you will need the serial number that is printed on your iZone system ID number this is a nine digit number.

You will also be asked for a password which you should remember as you will need this password to access your system when you are trying to access your system from outside the WiFi range.

To reduce the data usage there may be a slight delay between changing a function on your phone, and the system updating, when using iZone World Wide.
3.12 Home automation integration

iZone systems can be integrated into any home automation system that has an RS 232 or RS485 serial interface. The iZone home automation module is fitted as standard with RS 232 and RS 485 connectors for serial interface.

For serial interface specifications please download a copy of Airstream’s Technical Catalogue at

Your home automation integrator will need to write the suitable code to control your AC system. This service is not provided by Airstream or iZone.
3.13 iSense controller configuration

Press and hold the “iSense” button to enter the Occupancy Strategy configuration menu. Follow the prompts to select the most appropriate strategy for your room or use the Custom Setup option to design your own strategy.

Indicates the iSense has been activated on this controller.

Press and hold the “Airflow” button to configure the controller. Here you can configure the correct Zone to control and you can calibrate the sensor if required.

Note: When iSense has been activated, movement is required in the range of the occupancy sensor to keep the zone operating. The use of the iSense feature in bedrooms, when the occupants are asleep, is not recommended.
4.1 iZone 211 home screen

- To get back to the Home screen at any time press.

- When entering names or values using the keyboard it is easier to use a thin object such as a toothpick. Do not use sharp, hard objects as they may damage the screen. The enter button must always be pressed to save the changes you have made.

- Some functions may have been locked by your installer to ensure the commissioned values are not changed. To make changes to these values contact your installation company.
4.2 iZone 311 home screen

- To get back to the Home screen at any time press.

- When entering names or values using the keyboard it is easier to use a thin object such as a toothpick. Do not use sharp, hard objects as they may damage the screen. The enter button must always be pressed to save the changes you have made.

- Some functions may have been locked by your installer to ensure the commissioned values are not changed. To make changes to these values contact your installation company.

Press to turn your system on or off.

Press to change the A/C unit settings (4.3).

Press to change zone airflow (4.7).

Press to activate a schedule or to configure a new schedule (4.11).

Press to activate or deactivate this screen's audio feedback (beep on touch).

Press to change zone status (4.4).

Press to toggle sleep timer options.

Press to activate a favourite mode or to configure a new favourite (4.9).

Press to change screen settings (4.14).

Press to set system time and date (4.13).

Press to switch isave On

Press to configure the system (3.0).

A/C system maintenance required or A/C unit fault code. Press to clear

Tag line this will vary depending on the installation company.

WiFi connection
### 4.3 AC unit control (iZone 311 only)

**Current AC unit set point.**

Press here to change the mode.

Indicates the temperature measured by this panel is currently controlling the AC unit (Only applicable if systems configured for “AC unit controlling sensor—Master” option. (See 3.3).

Indicates the current status of the AC unit. If a fault code appears here please contact your installer.

Press here to increase the AC unit set point. (Not applicable if “AC unit controlling sensor—Zones” option selected. See 3.3).

Press here to decrease the AC unit set point (Not applicable if “AC unit controlling sensor—Zones” option selected. See 3.3).

Press here to change the fan speed.

AC unit actual temperature (RA, sensor or touch screen)

Press here to go back to the home page.
4.4 Zone control

Indicates this zone is currently in climate control mode.

Zone Name. Press to edit zone name and other zone settings (3.2).

Indicates this zone is currently fully open.

Indicates this zone is currently closed.

Indicates the hall is an electronic constant and it is currently active.

Indicates Zone 1 temperature set point. Press here to change the Set point. (3.2).

Indicates this zone is closed. Press here to open the zone.

Indicates this zone is open. Press here to close the zone.

Indicates this zone is currently being overridden by the system and is being used as a constant because too many zones are closed.

Press here to go back to the home page.

Scroll up or down to see more zones.
4.5 Edit zone names & settings

Current zone being edited.

System zone number and display name.

Zone maximum and minimum airflow set points.

Status of this zone if it has been selected as an electronic constant.

Current zone status.

Press to edit zone name.

Press to edit current zone status.

Press to change maximum and minimum airflow set points.

Press to increase or decrease airflow set point.
4.6 Adjusting temperature controlled zones

Indicates current zone being adjusted.

Indicates current temperature set point required for this zone.

Press here to allow iZone to automatically control the temperature in this zone.

Press here to fully open this zone.

Press here to allow iZone to automatically control the temperature in this zone.

Indicates the actual temperature in this zone (as measured by iZone).

Scroll up or down to see more zones.

Indicates battery in the sensor serving this zone requires replacement. (only if RF sensor is installed)

Indicates RF strength from sensor serving this zone is acceptable (only if RF sensor is installed)

Press here to increase the current zone set point temperature.

Press here to decrease the current zone set point temperature.

Press here to close this zone.

Press here to select this zone as the master (only available if configured for Master AC unit control. (see 3.3)

Indicates the current temperature of the air inside the air conditioning system ductwork.

Press here to go back to the zone summary.
4.7 Zone airflow summary

- **Zone name.**
- Indicates current minimum air flow setting to this zone.
- Indicates current maximum air flow setting to this zone.
- Press here to change the zone air flow settings (3.2).
- Scroll up or down to see more zones.

**Inventive · Intelligent · Intuitive**
4.8 Changing zone airflows

Please note: It is possible to lock the maximum and minimum airflow settings in the configuration menus. If your screen does not display as indicated here and you require to make changes to airflows please contact your installer to activate your display.

- **Indicates current zone** that you are changing the airflow to.
- **Press here to increase the maximum airflow to this zone.**
- **Press here to decrease the maximum airflow to this zone.**
- **Press here to increase the minimum airflow to this zone.**
- **Press here to decrease the minimum airflow to this zone.**
- **Press here to go back to the airflow summary.**

**Scroll up or down to see more zones.**

**Indicates the current maximum airflow setting for this zone.**

**Indicates the current minimum airflow setting for this zone.** (This is usually set at 0%).

**iZone Inventive · Intelligent · Intuitive**
4.9 Favourites

Press the favourite you would like and iZone will automatically change all the zones settings for this favourite.

Indicates this favourite has not been used.

Press here to setup and edit favourites.
4.10 Assign and edit favourites

Indicates current favourite being changed.

Zone names.

Press here to change the name of this favourite.

Press here to go back to the favourites summary. Pressing the back button will save the favourite setting selected.

Indicates what mode you want each zone to operate in when this favourite is used. Change each zone setting to suit your requirements for this favourite.

Scroll up or down to see more zones.
4.11 Schedules

Any of your favourites can be set to automatically start at any time of your choosing. Press here to enable the time based schedule for favourite (PM Nap).

Press here to set up or edit a schedule on any favourite

Indicates an automatic time schedule has been enabled for this favourite.

Indicates no automatic time schedule has been enabled for this favourite.
4.12 Setting and editing a schedule

Indicates current schedule that you are changing or setting.

Indicates the start time for this schedule.

Indicates the stop time for this schedule.

Indicates the days this schedule will apply. Press to stop the schedule running on this day.

Indicates the days this schedule will not run. Press the day you want the schedule to apply to.

Press the key pad to change the time. Remember it is in 24 hour format so for 2:30 am type in 0230.

Press the enter button to save your new setting.

Press here to go back to the schedule summary.

Press next to see the next schedule.

Indicates the start time for this schedule.

Indicates the stop time for this schedule.
4.13 Setting the time

Current time.

Indicates the minutes are being changed.

You must press the enter button to save the changes you have made.

Current date.

Press the left or right arrows to move to the value you want to change.

iZone Inventive · Intelligent · Intuitive
4.14 Changing the home screen colour

Slide left / right to adjust the screen brightness.

Slide left / right to adjust the screen contrast.

Slide left / right to adjust the screen saturation.

Press the colour you would like for your home screen. Fine adjustments to the shade, tone, hue can be made using the brightness, contrast and saturation slides.

Press here to go back to the home screen.
4.15 iSense controller

Note:
When iSense has been activated movement is required in the range of the occupancy sensor to keep the zone operating. The use of the iSense feature in bedrooms, when occupants are sleeping, is not recommended.
4.16 Further assistance

1. If you require warranty or maintenance on your air conditioning system or iZone system you should contact your installation company.

2. If you want to add more zones or temperature control to any zone you should contact your installation company.

3. If you require assistance setting up or operating your iZone Home Automation Module contact:

   Airstream Components
   www.air-stream.com.au
   info@air-stream.com.au
   Phone 08 9418 6631
